ATRT-03 S2 Product Line

The ATRT-03 S2 line is Vanguard's third generation family of microprocessor-based, automatic, three phase, transformer turns-ratio testers. The ATRT-03 S2 line consists of the following three models:

- The ATRT-03 S2 is a line-powered, 100-240 Vac, 50/60 Hz turns-ratio tester featuring a built-in thermal printer.
- The ATRT-03A S2 can be powered either by an internal rechargeable lead acid battery, by 100-240 Vac, or by a 12 Vdc external source. The internal battery provides 3 hours of operational time. The ATRT-03A S2 also features a built-in thermal printer.
- The ATRT-03B S2 is a line-powered, 100-240 Vac, 50/60 Hz turns-ratio tester without a built-in thermal printer.

The ATRT-03 S2 product line has a long history of reliability. The first generation ATRT-03 product line was introduced in 1995, and the second generation followed its success starting in 2002. The current third-generation ATRT-03 S2 product line has been in production since 2008. With over 250 units sold world-wide, the ATRT-03 S2 line is a proven industry workhorse.
